Premier train-the-trainer program

Let our trainers train your trainers! Our flexible and client-focused approach will provide your organization with the highest-impact train-the-trainer solution. Most organizations have in-house professional training staff on board to deliver training but don't have the time to evaluate, initiate and develop all of the materials required. We recognize your in-house trainers are experts when it comes to understanding your organization, mission, culture and employees the best! Since they know best how to improve productivity and growth in your organization, our focus is to provide a flexible solution in order to deliver a high-impact, results-oriented training program.

Gain a practical, how-to overview of the entire Emagispace® Product Line and Build Process. Through modeling of the best practices and latest techniques in training, and delivery, you'll be certified on the Four Phases of Emagispace Installation:

- **Purpose & Assessment**
- **Planning & Preparation, Assembly and Installation**
- **Disassembly, Conveyance, and Storage**
- **Performance and Evaluation**

New trainers will gain a strong foundation in critical training skills and seasoned trainers will be introduced to new approaches for delivering the powerfully advanced Emagispace Product Line and Build Process.

The Emagispace Training Certificate content is practical and grounded in the real world, not just theory. This program focuses on what happens before (how to assess and order), during (how to assemble/install), after (how to dismantle and store), and what to do if you have additional requirements not covered in the training.

Face-to-Face (3 days) or On-Site (Flexible dates & duration)

DAY 1

Up to five client trainees will learn about the content and material. By identifying the purpose, and the correct pre-assessment, client trainees will be able to correctly pre-plan, order, and stage the build process.

DAY 2

Our trainer will walk client trainees through the Assembly and Installation process: Content and materials, visual aids, handouts, examples, background and theory behind Emagispace will all be brought to bear and ensure the client is able to improvise with traditional building techniques and deliver a superior experience.

DAY 3

Trainees learn the correct disassembly, conveyance, and storage of Emagispace. Then they'll conduct the course for the Performance and Evaluation phase so that each installation goes smoother than the last. Concurrently the trainee learns correct critique methodology and provides feedback. This can be done either with or without videotaping.

Premier train-the-trainer program

Why You Should Attend

- Learn the basics of Emagispace® Products and Building Process/Methodology.
- Gain a foundation in conducting a needs assessment, developing objectives, and evaluating the impact of the Emagispace Build Process.
